[FEATURE] Add a Format.Case ViewHelper

This adds a Format.Case ViewHelper that changes

a string's case in various manners like uppercase,

lowercase, (un-)capitalization and

each-word-capitalization.

FYI: I just added a test case for this View helper to the Viewhelpertest package: https://review.typo3.org/#/c/20671/

It does not seem to be resolved, unless I am misunderstanding something here.

The namespaces is wrong, if used with TYPO3 CMS 6: at the moment it is

namespace TYPO3\Fluid\ViewHelpers\Format;

but should be:

namespace TYPO3\CMS\Fluid\ViewHelpers\Format;

(with the "CMS\")

This is also true for the class definition.

Please correct me, if my comment here is in a wrong context. Thanks!

Can't find "CaseViewHelper.php" in "typo3_src-6.2.0alpha2".

Please add the ViewHelper to V6.2.0.

Thank you!

Will this be part of TYPO3 6.2?

Robert, Michael and Bjoern: could you please, if any, open an issue at http://forge.typo3.org/projects/typo3v4-fluid and point to this one? This thread is for TYPO3 Flow's Fluid.
