

Core - Bug # 44745

Status:	New	Priority:	Should have									
Author:	Jigal van Hemert	Category:	Workspaces									
Created:	2013-01-23	Assigned To:										
Updated:	2015-01-23	Due date:										
TYPO3 Version:	4.7											
PHP Version:												
Complexity:												
Is Regression:	No											
Sprint Focus:												
Subject:	Slider split preview uses only part of the available height											
Description	<p>It's already been mentioned in http://forge.typo3.org/issues/11539#note-5 but in current versions of many browser the slider split preview will only use a small part of the screen in certain cases.</p> <p>It seems that JS errors/warnings prevent the iframes from using the full height of the browser and they are displayed with only approximately 150px height (as noticed in http://forge.typo3.org/issues/11539#note-11).</p> <p>Tested on Windows Vista the following browsers were tried:</p> <ul style="list-style-type: none">- Chrome: displayed full height of browser- Firefox, Opera: only 150px- IE9 : only 150px plus the slider couldn't be dragged <p>Screenshot: see http://forge.typo3.org/attachments/4799/comparison_view_ff36_mac.png (from issue #11539)</p>

- Status changed from New to Needs Feedback
- Target version set to 4.5.23

Do you have a stack trace of the mentioned JavaScript error available. I'm still wondering why a problem inside an IFrame causes the parent frames/documents to have issues as well.

#2 - 2013-07-12 15:19 - Hercules Karvasonis

I am also able to reproduce that on latest TYPO3 4.7.12.

I followed those steps:

- Clicked on the Workspace module
 - Generated a preview link
 - Viewed the page with that link
 - Opened the page from within the backend with the slider view and the height is very small.
- In this case if i delete the "ADMCMMD_prev" cookie then the page with the slider loads correctly.

Did anyone else find any way to reproduce that or fix it?

#3 - 2013-11-29 16:08 - Sven Proffe

| *Did anyone else find any way to reproduce that or fix it?*

It's reliably reproduceable on TYPO3 6.1.6. Obviously not fixed yet. Could someone set this issue to "Must have"? This error is pretty annoying and quite unexplainable to editors.

BTW: The Live view throws this error:

Fatal error: Call to a member function getSessionData() on a non-object in
typo3/sysext/workspaces/Classes/Hook/TypoScriptFrontendControllerHook.php on line 49

Seems to me, that this is responsible for the bug.

Thanks & regards
Sven

@Hercules Karvasonis

your issue sounds more like <http://forge.typo3.org/issues/18761>

#7 - 2014-02-26 10:45 - Thomas Sperling

I have the same issue. I researched and found out the problem is that backendDomain is not set in the IFrame. So you got in the parent 'document.domain = "xyz.domain.de"' and in the IFrame 'document.domain = ""'.

A similiar problem is maybe related: <http://forge.typo3.org/issues/30643>

- *Target version deleted (4.5.23)*

#9 - 2014-11-18 17:28 - Hercules Karvasonis

Alexander,

i tried the fix from issue #18761 and it is not working.

I can still experience the issue as i described it above.

Thanks,
Hercules Karvasonis.
