

## TYPO3.Flow - Bug # 44753

<b>Status:</b>	Closed	<b>Priority:</b>	Must have
<b>Author:</b>	Adrian Föder	<b>Category:</b>	Session
<b>Created:</b>	2013-01-23	<b>Assigned To:</b>	
<b>Updated:</b>	2013-02-06	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>			
<b>Affected Flow version:</b> Git master			
<b>Subject:</b>	Using 'authenticationRequired' action name for "WebRedirect" gives exception		
<b>Description</b>			
<p>//edit: nevermind initial description; the actual point is: if my action is named like below ("authenticationRequired"), the exception occurs as described. However, if I rename the action to something else, even maybe "authRequired", the problem does not occur. I verified that definitely with a fresh cache-flush and warmup and a very fresh browser instance each time...</p> <p>-----</p> <p>(following is obsolete):</p> <p>consider the following use case:</p> <pre>1 security: 2 authentication: 3 providers: 4   DefaultProvider: 5     provider: 'PersistedUsernamePasswordProvider' 6     entryPoint: 'WebRedirect' 7     entryPointOptions: 8     routeValues: 9       '@package': 'Acme.Acme' 10      '@controller': 'Authentication' 11      '@action': 'authenticationRequired'</pre> <pre>1// AuthenticationController: 2public function authenticationRequiredAction() { 3  \$this-&gt;addFlashMessage('You must be logged in to see this page'); 4 5  // not necessary to reproduce, but to show the intention: 6  # \$this-&gt;forward('login'); 7}</pre> <p>□</p> <p>#1: Notice: unserialize(): Error at offset 12196 of 12384 bytes in ...\TYPO3.Flow\Classes\TYPO3\Flow\Cache\Frontend\VariableFrontend.php line 80</p>			
The following is the end of the serialized content:			

```
controllerActionName";s:5:"index";s:12:" * arguments";a:0:{}s:20:" *
internalArguments";a:1:{s:11:"__csrfToken";s:32:"8dc6e96bfbbed85aec3b0ea7c45d6bc85";s:18:" *
pluginArguments";a:0:{}s:20:" * argumentNamespace";s:0:"";s:9:" * format";s:4:"html";s:13:" * dispatched";b:1;s:16:" *
parentRequest";r:65;s:14:" * rootRequest";r:65;s:19:" *
referringRequest";N;}}i:2;O:47:"TYPO3\Fuild\Core\Widget\AjaxWidgetContextHolder":2:{s:23:" *
nextFreeAjaxWidgetId";i:0;s:17:" * widgetContexts";a:0:{}}
```

The offset 12196 is exactly the (last) semicolon at rootRequest";r:65;, so maybe a recursion fails or something...

That VariableFrontend access, btw, comes with TYPO3\FLOW\Session\Session\_Original::resume().

Can you (please) reproduce this? Just adding that ->addFlashMessage() to a WebEntryPoint'ed controller action and hitting a secured page (letting the WebEntryPoint kick in) with a fresh session should show the error.

## History

---

### #1 - 2013-01-23 16:36 - Adrian Förder

- Subject changed from Adding a FlashMessage in a "WebRedirect" chain gives exception to Using 'authenticationRequired' action name for "WebRedirect" gives exception

### #2 - 2013-02-06 13:09 - Adrian Förder

- Status changed from New to Closed

the description is complete nonsense; I will evaluate further...
