History

#1 - 2013-01-29 16:42 - Sebastian Kurfuerst

- Status changed from New to Accepted

#2 - 2013-01-29 17:56 - Robert Lemke

- Subject changed from Decide on TYPO3CR names to Decide on TYPO3CR node type names

#3 - 2013-01-29 17:57 - Robert Lemke

- Category set to Content Repository

Node Types

old name: Content Types

Node

Hidable (mixin)

- defines the properties for "hidden", "hiddenBeforeDateTime", "hiddenAfterDateTime"

Versionable (mixin)

- adds the behavior to store multiple versions of the node

Translatable (mixin)

- adds the behavior to translate nodes

Folder < Node

- used for organizing nodes

- does not need an external identity, thus no URL.

Smartfolder < Folder

- does not contain actual sub nodes

- collection is defined through a query

Document < Node, Hidable

old name: Folder

- is "abstract", cannot be rendered as is
- sub types of Document:
 - can be addressed through a URI
 - contains one or more Section nodes which may contain content
 - can be rendered
- TODO remove title property
- TODO page tree > document tree (?)

Page < Document

- is the default document paradigm in Neos
- introduce further properties, for example a title

Shortcut < Document

- refers / forwards to another document

Blog Post < Document

- introduces specific properties and sub structure

Content < Node, Hidable

old name: ContentObject

- is not usually accessible through a URI
- can be rendered as part of a document
- may contain further content
- cannot contain documents

Headline < Content

- introduces specific properties and template
- further content types: Text, Image, TextWithImage, Menu, Html, Plugin, Two-Columns, ...

Plugin < Content

- delegates rendering of the content to a controller

ContentCollection < Content

old name: Section

- contains content nodes
