

TYPO3.Flow - Bug # 44997

Status:	Resolved	Priority:	Must have
Author:	Adrian Föder	Category:	MVC
Created:	2013-01-31	Assigned To:	Adrian Föder
Updated:	2013-03-20	Due date:	
PHP Version:	5.3		
Has patch:	Yes		
Complexity:			
Affected Flow version:	FLOW3 1.0.0		
Subject:	JsonView outputs unreliable DateTime representation		
Description	<p>Currently, the JsonView just outputs Y-m-d H:i:s as string when it comes to a DateTime object. This is incorrect since it doesn't care about time zones / offsets.</p> <p>Error case:</p> <ul style="list-style-type: none">- it's 15:13 GMT, a record is created- the record is stored in 14:13 UTC- after Hydration, the DateTime object represents 14:13 UTC- JsonView's H:i:s makes "14:13" of it- (maybe) the string is directly given to JavaScript's new Date() constructor, resulting (due to GMT local time) in 14:13 GMT which is obviously wrong. <p>Solution: add a timezone offset as in ISO 8601 which is also directly accepted by JavaScript's Date() constructor and probably any other "magical" datetime parser.</p>

Revision e5ed0ff7 - 2013-01-31 07:59 - Adrian Föder

[!!!][BUGFIX] Expose timezone in JsonView's DateTime output

This corrects the string formatting in JsonView regarding DateTime objects. The additionally required Timezone offset is appended as of ISO 8601 in order to not lead into timezone issues after transferring the resulting JSON.

This is breaking in cases where the original incorrect behaviour was worked around by subsequent processing of the transmitted timestamp.

Fixes: #44997

Releases: master, 2.0
