Updated:	2013-10-22	Due date:	
Subject:	[WIP] Context sensitive help in the Neos Backend (accessibility step 2)		
Description			
<h3>Accessibility of the Neos Backend</h3>			
<ul style="list-style-type: none">- Target Audience: "power users or people with disabilities" who want to edit content using the keyboard or assistive devices like screen readers- Responsible: Rens Admiraal <rens.admiraal@typo3.org>- Implemented by: Rens Admiraal, Patrick Broens- Amount: 20 work days- Version: nice to have for 1.1- Planned Implementation Timeframe: X - Y			
Motivation			
<p>People with disabilities can have huge problems using webapplications. There are specifications available like WAI-ARIA which can be used for enabling those people to use all features the Neos interface offers.</p> <p>A power user is used to using keyboard shortcuts and navigation. As the WAI-ARIA specification already requires keyboard navigation the power user will have a faster editing experience.</p>			
Goal			
<p>This work package extends http://forge.typo3.org/issues/45007 and aims for further implementation of the WAI-ARIA specification with most importantly the context sensitive help. Furthermore the interface will be tuned so all elements are descriptive for their role and usage.</p>			
Deliverables			
<ul style="list-style-type: none">- Context sensitive help with tooltips (localization, based on WAI-ARIA specification)- WAI-ARIA compatible WYSIWYG editor (with correct descriptions of elements and correct navigation)- Check and adapt the interface for correct contrast for readability- Change the backend so all components have the right descriptions and labels- Documentation- Publications			
Subtasks:			
Task # 48244: Add context sensitive help			New
