TYPO3.Fluid - Bug # 45184

Status:	Closed	**Priority:**	Should have
Author:	Dominique Feyer	**Category:**	ViewHelpers
Created:	2013-02-05	**Assigned To:**	Bastian Waidelich
Updated:	2013-03-26	**Due date:**	

Has patch:	No
Affected Flow version:	Git master
Subject:	Additional identity filed are not rendered, after validation error

Description

Found a strange bug this afternoon. I have a form with children object, when the form is rendered I have 3 hidden fields with the different __identity value, but after a validation error I only see on hidden field with the identity of the main object.

I my case, this cause a big trouble, has Flow build a new object, and doctrine is configured to cascade persist on a one to one relation. This cause the child object data to be "replaced" by the new object data, and I loose all the property of the object that are not in the form.

Patch if coming
