TYPO3.Flow - Feature # 45282

Work Package # 45088 (Resolved): Improved REST support

Status:	Resolved	**Priority:**	Should have
Author:	Bastian Waidelich	**Category:**	Security
Created:	2013-02-08	**Assigned To:**	Bastian Waidelich
Updated:	2013-06-07	**Due date:**	2013-04-13
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Support for "sessionless authentication"		

Description

Currently Flow relies on a session to be active in at least three places:

1. \TYPO3\Flow\Security\Aspect\RequestDispatchingAspect::blockIllegalRequestsAndForwardToAuthenticationEntryPoints() calls \TYPO3\Flow\Security\Context::setInterceptedRequest() if an **entryPoint** is defined. Setting the intercepted request starts a session. This can be worked around by avoiding entryPoint or using requestPatterns to limit them only to certain parts of an application that allow sessions. #45100 might also be a solution for that
2. \TYPO3\Flow\Security\Authentication\AuthenticationProviderManager::authenticate() emits the authenticatedToken signal after successful authentication which is configured to call \TYPO3\Flow\Session\SessionInterface::renewId()
3. \TYPO3\Flow\Security\Authentication\AuthenticationProviderManager::isAuthenticated() returns FALSE if no session was started/can be resumed

[!!!][FEATURE] Support for "sessionless authentication"

This feature enables authentication without the need of a session to be started.
This is useful for stateless services (e.g. REST) where you don't want Flow to create
a session cookie.

This is a breaking change if you created a custom authentication provider or -token
and relied on the fact that AuthenticationProvider::authenticate() started a session.
With this change the session is started when AuthenticationToken::updateCredentials() is
called. This way the token can decide if it needs a session.
Just add a @Flow\Session(autoStart=true) to the updateCredentials() method if your custom
token relies on a session.

Revision bd46c612 - 2013-03-05 13:23 - Bastian Waidelich

[BUGFIX] Fix security related functional tests

With the fix related to "sessionless authentication"
(I5f86cb7a3a3fff3220d61d705f216e1b1d4f2369) settings have been
adjusted in order to use the testing provider & token only for requests
matching a ControllerObjectName of "TYPO3\Flow\Tests\.*".

This change adjusts the tests accordingly.

Revision 9feb5902 - 2013-04-05 17:06 - Robert Lemke

[FEATURE] Support for sessionless authentication

This feature enables authentication without the need of a session to be started. This is useful for stateless services (e.g. REST) where you don't want Flow to create a session cookie.

Authentication tokens which don't rely on a session simply implement the SessionlessTokenInterface marker interface.

This patch reverts parts of the first implementation of sessionless authentication introduced in https://review.typo3.org/#/c/18388
(commit I5f86cb7a3a3fff3220d61d705f216e1b1d4f2369).
The original implementation was a breaking change with a few unresolved side effects.

The implementation contained in this change set is backwards compatible with already existing authentication tokens which relied on sessions.

This patch also contains a small speed optimization for the CSRF Protection pattern which assumes that no account has been authenticated yet if the Authentication Manager is still a Dependency Proxy.
