

TYPO3.Flow - Bug # 4602

Status:	Resolved	Priority:	Must have
Author:	Irene Höppner	Category:	Cache
Created:	2009-09-12	Assigned To:	Karsten Dambekalns
Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	memcache doesn't work		
Description			
<p>I tried to use memcache for parts of the cache.</p> <p>Added the following configuration to Caches.yaml:</p> <pre>Default: backend: F3\FLW3\Cache\Backend\MemcachedBackend backendOptions: defaultLifetime: 0 Servers: [localhost:11211]</pre> <p>This error occurs:</p> <pre>Fatal error: Call to a member function getScriptPathAndFilename() on a non-object in C:\Programme\xampp\htdocs\f3\intranet\Packages\Framework\FLOW3\Classes\Cache\Backend\MemcachedBackend.php on line 175</pre> <p>To check, whether the memcached-server is up and running, I used the following PHP-script:</p> <pre><?php \$memcache = new Memcache; \$memcache->connect('localhost', 11211) or die ("Could not connect"); \$version = \$memcache->getVersion(); echo "Server's version: ".\$version."
\n"; \$tmp_object = new stdClass; \$tmp_object->str_attr = 'test'; \$tmp_object->int_attr = 123; \$memcache->set('key', \$tmp_object, false, 10) or die ("Failed to save data at the server"); echo "Store data in the cache (data will expire in 10 seconds)
\n"; \$get_result = \$memcache->get('key'); echo "Data from the cache:
\n";</pre>			

```
var_dump($get_result);
```

```
?>
```

The result is:

Server's version: 1.2.1

Store data in the cache (data will expire in 10 seconds)

Data from the cache:

```
object(stdClass)#3 (2) { ["str_attr"]=> string(4) "test" ["int_attr"]=> int(123) }
```

Revision 2f4303f9 - 2009-09-22 23:57 - Karsten Dambekalns

[+BUGFIX] FLOW3 (Cache): Added missing dependency configuration for memcache and APC backends to Objects.yaml, fixes #4602.

[~TASK] FLOW3 (Cache): Fixed memcache (and APC) backend to use the cache identifier in their prefix in order to not overwrite entries from different caches having the same entry identifier. Tweaked Caches.yaml so it is possible to change the default cache backend to something with more options than the TransientMemoryBackend. Relates to #4602.

- *Target version set to 1.0 alpha 5*

#2 - 2009-09-22 18:11 - Karsten Dambekalns

First issue: Objects.yaml misses the dependencies for the backend, autowiring is off. Solved.

Next issue: Settings default options breaks with backends that don't support them... bah!

I'm at it...
