

TYPO3.Fluid - Bug # 46038

Status:	Closed	Priority:	Should have						
Author:	Christian Müller	Category:	ViewHelpers						
Created:	2013-03-05	Assigned To:	Bastian Waidelich						
Updated:	2013-03-26	Due date:							
Has patch:	No								
Affected Flow version:	(any)								
Subject:	Subproperty with Radio fields doesn't render hidden identity property								
Description	<p>If you render a form and access a property in a subobject in your forms bound object via radio input field there are no hidden identity fields rendered as the radio input expects a value to be set in addition to the property which in turn prevents the <code>addAdditionalIdentityPropertiesIfNeeded()</code> to be called ever.</p>

History

#1 - 2013-03-14 20:58 - Benno Weinzierl

I am having a somewhat similar problem when an validation-error occurs.

In this case `$this->addAdditionalIdentityPropertiesIfNeeded();` is also not called (in `\TYPO3\Fluid\ViewHelpers\Form\AbstractFormFieldViewHelper` in `Method getValue()`).

Why is it not called? Was this simply forgotten or is there a reason for not calling `$this->addAdditionalIdentityPropertiesIfNeeded()` in these two cases?

I added the method call for the error-case, but then in my create-Form i get the error:

#1243325768: No value found for key "TYPO3\Fluid\ViewHelpers\FormViewHelper->formObject"

So this needs a bit more knowledge of the Fluid internals...

#2 - 2013-03-25 18:46 - Gerrit Code Review

- Status changed from Accepted to Under Review

Patch set 1 for branch **master** has been pushed to the review server.

It is available at <https://review.typo3.org/19275>

#3 - 2013-03-25 18:46 - Gerrit Code Review

Patch set 1 for branch **master** has been pushed to the review server.
