Has patch:	No		
Complexity:			
Subject:	Allow unknown / disallowed properties to be skipped		
Description			
<p>When using the PropertyMapper, it is useful to allow for partial mapping of sources to a target. This way one can skip certain values in the source. Right now this is not possible, one can only map all source properties.</p> <p>I suggest to add skipProperties(\$name [, \$name]) like the existing allowProperties() and skipUnknownProperties() like the existing mapUnknownProperties()</p>

[FEATURE] Allow unknown / disallowed properties to be skipped

This adds skipUnknownProperties() and skipProperties() to the PropertyMappingConfiguration. If configured to skip all unknown or the given properties, the PropertyMapper will not throw an error if they are found in the source when doing property mapping.
