<b>Subject:</b>	Must support subcontext		
<b>Description</b>			
If we use "Production/Staging" context per ex. we have a subdirectory in the configuration directory, and this directory break the SymlinkConfigurationTask because we use "rm -f Production/*", but should be "rm -Rf Production/*"

[BUGFIX] Sub-contexts are not supported

If using e.g. "Production/Staging" as context a subdirectory in the configuration directory exists. This directory is now correctly removed using "rm -Rf Production/\*" instead of "rm -f Production/\*". The SymlinkConfigurationTask thus no longer breaks.
