

TYPO3.Fluid - Task # 46091

Status:	Needs Feedback	Priority:	Should have
Author:	Christopher Hlubek	Category:	
Created:	2013-03-07	Assigned To:	
Updated:	2013-03-07	Due date:	
Has patch:	No		
Subject:	Show source file name and position on exceptions during parsing		
Description	<p>It would be really helpful to spot errors if the Fluid TemplateParser would show the current source file and line number on errors. Right now there's absolutely no clue in the exception handler where to look for the error.</p>

- Status changed from New to Needs Feedback

Hi Christopher,

I think this is (kind of) a duplicate of #4704

Showing source and line number is not so easy because of the compiled templates - but at least for parsing errors it should be fairly easy (because that happens before the compilation).

Another really simple solution would be to catch ViewHelper exceptions (we already do but rethrow them in dev context) and display them inline. see <http://lists.typo3.org/pipermail/flow3-general/2012-December/003172.html>

#2 - 2013-03-07 11:26 - Christopher Hlubek

- Subject changed from Show source file name and position on exceptions to Show source file name and position on exceptions during parsing

Okay, so I would be interested to improve that at least for the parsing then. Runtime exceptions during evaluation is a different story.
