

TYPO3 Flow Base Distribution - Bug # 46485

Status:	Resolved	Priority:	Should have
Author:	Rens Admiraal	Category:	
Created:	2013-03-21	Assigned To:	Rens Admiraal
Updated:	2013-03-27	Due date:	
Affected Flow version: Git master			
Subject:	The exceptionhandler handles exceptions too strict		
Description			
<p>The ExceptionHandler should check if error_reporting is enabled. This is because we set the exceptionhandler in testing context (for example).</p> <p>In http://ca2.php.net/manual/en/language.operators.errorcontrol.php it's stated that even though the @ is used the exceptionhandler will be called if set_error_handler is used.</p> <p>For this reason we should check in the exception handler if errors are ignored by using error_reporting() === 0</p>

[BUGFIX] Make the AbstractExceptionHandler check for error_reporting()

When the shut-up operator is used in PHP the error_reporting level is temporarily lowered to 0. The AbstractExceptionHandler does not check for this, and outputs the exception whenever it is called.

This is a problem when the set_exception_handler method is used, as PHP will still call those exception handlers even if the shut-up operator is used. This is why the AbstractExceptionHandler should check for error_reporting() === 0 and ignore the exception if so.

This change fixes the exit code 255 error during the compile run which is thrown in the Testing context where we set E_WARNING to be an exceptional error.
