

TYPO3.Neos - Bug # 46630

Status:	Rejected	Priority:	Should have
Author:	Soren Malling	Category:	
Created:	2013-03-24	Assigned To:	
Updated:	2013-04-10	Due date:	
Subject:	Submodules doesn't support linking to a different controller		
Description			
While trying to do a simple concept implementation of TYPO3 FormBuilder I found out, that links with a "Controller" argument isn't supported. The "Controller" argument isn't respected, and the link points to the registred (in Settings.yaml) controller			

History

From my research, it's about either extending the Routes configuration for modules URI or extending the BackendModuleArgumentsRoutePartHandler class

Any hints on this?

- Status changed from New to Rejected

AFAIK it's only supported using regular links within the same module controller. If you need to jump to another controller it has to be registered as a module and the link module view helper, another solution is to use sub requests like it's done in Expose.

I'm rejecting this for now since it's not a bug, but as intended at least for the time being.
