[TASK] Replace DynTabMenu with jQuery/RequireJS plugin

The DynTabMenu code can be abstracted and cleaned - done via RequireJS + jQuery.

A completely new jQuery plugin is written that stores the current selected tab ID in the local storage (available in IE8+) or falls back to the first tab of the menu item.

The changes separates logic (JS) from structure (HTML), and removes plain old JS.

Resolves: #47003

Releases: master

- Status changed from Resolved to New

Following this change, FormEngine->dynNestedStack is incorrect. It seems that the numbering of tabs has changed. But there are also sometimes more than one element at the same level in the stack.

Therefore the RTE cannot display correctly in a tab. Most obviously, the height of the iframe is wrong as well as the width of ExtJS comboboxes. This is because browsers cannot calculate and set dimensions inside an element with display: none.

The problem does not appear outside a tab. For example, when using the full screen RTE wizard.

The problem does not appear in IREE elements, if they are not inside a tab.

The problem occurs also in flexforms that are rendered with tabs containing RTE-enabled fields.
