

Testing - Bug # 471

Status:	Resolved	Priority:	Could have
Author:	Malte Jansen	Category:	
Created:	2008-04-16	Assigned To:	Robert Lemke
Updated:	2010-10-20	Due date:	
Subject:	Crash of Apache on Windows		
Description			
If I run the TestRunner on any package, the apache shuts down (or sometimes restarts).			
Following Error is logged:			
[Wed Apr 16 20:15:23 2008] [notice] Parent: child process exited with status 3221225477 -- Restarting.			
Via google I found this hint for the php.ini:			
output_buffering = On			
The result is, that the first lines are shown, but the apache still shuts down...

Which PHP Version? Which operating system? Which Apache version?

Maybe this is your problem:

<http://bugs.php.net/bug.php?id=44226>

#2 - 2008-04-17 18:07 - Malte Jansen

I'm using:

Win XP Pro SP 2

Apache/2.2.6 (Win32, Xampp)

PHP/5.2.4 (Xampp)

Could also be this problem, because here is the same apache-error mentioned.

<http://bugs.php.net/bug.php?id=44546>

I will try to use a newer version of PHP.

#3 - 2008-04-17 19:05 - Malte Jansen

With
PHP/5.2.5 there is no change...

#4 - 2008-04-17 19:27 - Malte Jansen

If removed all

```
try {} catch {}
```

Still using the content of the try-part.

The error still appears.

I forgot to mention. The first to tests are displayed...

#5 - 2008-04-17 22:26 - Malte Jansen

I have made some further tests.

It does not matter, if there is one single test, which succeeds or fails. The apache always crashes...

#6 - 2008-04-18 18:42 - Tim Eilers

Same here with newest original code.

XP Pro SP2
Apache 2.2.8 (Win32)
PHP 5.2.5
(xampp)

I am getting exactly the same error Malte mentioned above (same number, too)!

#7 - 2008-04-23 13:48 - Malte Jansen

The problem occurse due to line 61 (
http://forge.typo3.org/repositories/annotate/packages-testing/trunk/Classes/Controller/F3_Testing_Controller_Default.php)

But if this line is missing some general PHPunit-error occurred.

#8 - 2008-04-23 21:44 - Tim Eilers

400 MB memory for php - apache still crashes.

#9 - 2008-05-29 09:55 - Robert Lemke

- *Estimated time set to 0.00*

Hi windows users,

can you try again debugging this issue by using a debug build of PHP? You can download a w32 debug pack at <http://www.php.net/downloads.php> .
That should give you some more meaningful output in the log files.

If someone has the time and expertise to do some memory profiling, that would be helpful as well: What makes the test runner consume so much memory?

#10 - 2008-06-05 17:01 - Karsten Dambekalns

- *Status changed from Needs Feedback to Resolved*

- *% Done changed from 0 to 100*

Applied in changeset r910.
