TYPO3.Flow - Bug # 47220

Status:	Resolved	**Priority:**	Must have
Author:	Christopher Hlubek	**Category:**	
Created:	2013-04-15	**Assigned To:**	Christopher Hlubek
Updated:	2013-04-15	**Due date:**	

PHP Version:	
Has patch:	No
Complexity:	
Affected Flow version: Flow 2.0.0 beta 1	

Subject:	Flow fails with new versions of symfony/console and doctrine/annotations

Description

Following the Quickstart steps the Flow 2.0.0-beta1 does not run anymore due to updated dependencies.

Steps taken:

```
composer create-project --dev --keep-vcs typo3/flow-base-distribution Quickstart 2.0.x-dev
cd Quickstart
./flow
```

Error:

```
Uncaught Exception
Execution of subprocess failed with exitcode "255" and output:

Fatal error: Class 'Symfony\Component\EventDispatcher\Event' not found in
.../Quickstart/Packages/Libraries/symfony/console/Symfony/Component/Console/Event/ConsoleEvent.php
on line 25
```

This seems to be an issue introduced by a recent symfony/console update. Could be fixed by excluding everything in Symfony\Component\Console or requiring symfony/event-dispatcher explicitly.

Next error:

Fixing that brings just another error:

```
Fatal error:
Doctrine\Common\Annotations\AnnotationRegistry::registerFile(): Failed
opening required
'.../Quickstart/Data/Temporary/Development/Cache/Code/Flow_Object_Classes/Annotation/IgnoreAnnotation.php'
(include_path='.:/opt/local/lib/php54/pear') in
.../Quickstart/Packages/Libraries/doctrine/annotations/lib/Doctrine/Common/Annotations/AnnotationRegistry.php
on line 59
```

Only classes from Doctrine.Common are ignored, but that package got split into doctrine/annotations and other packages. So we should also exclude everything in package doctrine.annotations.

History
