Has patch:	No		
Complexity:			
Subject:	Allow doctrine event listeners to be configured		
Description			
<p>The gedmo doctrine behavioral extensions depend on the doctrine event listener system to be configured when setting up the entity manager.</p> <p>This is currently not possible in Flow, but could easily be handled via configuration.</p> <p>I therefore suggest adding a new configuration setting <code>TYPO3.Flow.doctrine.eventSubscribers</code> which is a list of classes that extend <code>\Doctrine\Common\EventSubscriber</code> and are to be registered with the doctrine event manager inside the <code>entityManagerFactory</code>.</p>

[FEATURE] Allow configurable doctrine event subscribers

This change allows doctrine event subscribers and listeners to be configured via the options `TYPO3.Flow.persistence.doctrine.eventSubscribers` and `TYPO3.Flow.persistence.doctrine.eventListeners` respectively.

This feature allows doctrine extensions to be used with Flow, that depend on the doctrine event system, like the gedmo behavioral extension.

Resolves: #47228

Releases: master

History

#1 - 2013-04-15 12:03 - Alexander Berl

I mixed up event listeners and subscribers in the headline and description. I'm actually talking about the event subscribers, the basic idea could be extended for event listeners too, though those need a little different configuration syntax, as they need a list of event names and the event listener class.
