

## TYPO3 Flow Base Distribution - Bug # 47637

<b>Status:</b>	New	<b>Priority:</b>	Should have
<b>Author:</b>	Carsten Bleicker	<b>Category:</b>	
<b>Created:</b>	2013-04-27	<b>Assigned To:</b>	
<b>Updated:</b>	2013-04-27	<b>Due date:</b>	
<b>Affected Flow version:</b> Git master			
<b>Subject:</b>	Property with @ORM\Column(nullable=true,type="decimal",scale=2) results as type "string" in Collection Objects and not as expected as "double"		
<b>Description</b>			
<p>having a value object:</p> <pre>/** * A Price Value * * @Flow\ValueObject  */ class Price{     /**      * @var float      * @FLOW\Validate(type="NotEmpty")      * @ORM\Column(nullable=true,type="decimal",scale=2)      */     protected \$value;     /**      * @param float \$value      */     public function __construct(\$value) {         \$this-&gt;value = \$value;     }     /**      * @return float      */     public function getValue() {         return \$this-&gt;value;     } }</pre>			
<p>anything works fine until this:</p> <p>in a doctrine collection wich contains prices, the type of property \$value is "string" and not of type "double".</p> <p>so the following fails: <code>if(\$this-&gt;prices-&gt;contains(\$newPriceWithSameValue))</code> because property \$value of "newPriceWithSameValue" is type of "double".</p>
