Has patch:	No		
Affected Flow version:	Git master		
Subject:	HtmlentitiesViewHelper is scope singleton		

Description

The HtmlentitiesViewHelper currently is scoped singleton, why all other format ViewHelpers are of scope prototype. This leads to weird behaviour when using the ViewHelper multiple times within one template and a partial. See the related bug for more information.

[TASK] Bring format viewhelpers in line with each other

This change makes HtmlentitiesViewHelper scope prototype and makes most format ViewHelpers compilable by implementing renderStatic().

This has a positive impact on memory consumption (and possibly performance) because Fluid won't have to instanciate a view helper for each usage.
