Subject:	TypoScript editor does not inform IDocumentListener promptly		

Description

I'm working on an Eclipse plug-in which adds an *IDocumentListener* to open documents to listen to text changes while they happen, i.e. in real time.

Typing in the TypoScript editor does not result in a call of the *documentAboutToBeChanged()* method on that listener for the text changes while they are being made, but only once before the document is saved to disk. Then there is **one** *DocumentEvent* fired with always the whole file content as new text.
