### History

#### #1 - 2013-07-30 00:40 - Wouter Wolters

- Status changed from New to Needs Feedback

In 6.2 this is resolved to not use an AJAX call so when it fails an error message will be given.

The encryption key is fetched by an AJAX-call, can you check the return of that call?

#### #2 - 2013-09-12 17:05 - Christian Kuhn

- Status changed from Needs Feedback to Resolved

- Is Regression set to No

The 6.2 install tool takes care the encryption key is set, the logic was simplified and improved a lot.

Please re-open issue only if you still have issues with 6.2 encryption key, the 6.1 code in this area will probably not be changed anymore (at least I won't).
