

Core - Bug # 47774

Status:	Resolved	Priority:	Should have
Author:	d.ros no-lastname-given	Category:	Install Tool
Created:	2013-05-01	Assigned To:	
Updated:	2013-06-23	Due date:	
TYPO3 Version:	6.1		
PHP Version:	5.4		
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	Installtool System environment -> false negative on mail		
Description			
<p>Mail program not found or not executable</p> <p>sendmail_path = /usr/sbin/sendmail -t -i This may be critical to TYPO3's use of the mail() function. Please be sure that the mail() function in your php-installation works. If installation is completed, the mail system can be tested in the install tool.</p> <p>sendmail and mail are present on cli.</p> <p>cheers David</p>

History

#1 - 2013-05-01 01:26 - d.ros no-lastname-given

BTW: Testmail sending from installtool works.

#2 - 2013-05-08 14:09 - Michael Voehringer

Same on my system, but i think its an problem with the "open_basedir" setting, which prevents to open /usr/sbin/sendmail. Sending mail still works.

Is there an option to disable this test?

#3 - 2013-05-17 21:01 - Bernhard Eckl

Same on my system (Debian Squeeze with Plesk 11 and Postfix).

#4 - 2013-05-27 09:50 - Jan Loderhose

[Mon May 27 09:39:20 2013] [error] [client xxx] PHP Warning: is_executable(): open_basedir restriction in effect.

One should consider to dump this check.

#5 - 2013-06-23 14:41 - Christian Kuhn

- Status changed from New to Resolved

The test will be removed from SystemEnvironment with #49357 ... closing this issue here as duplicate.
