

TYPO3.Flow - Bug # 47858

Status:	Needs Feedback	Priority:	Should have
Author:	Christopher Hlubek	Category:	Package
Created:	2013-05-03	Assigned To:	Christopher Hlubek
Updated:	2013-08-14	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: Git master			
Subject:	Remove .htaccess from Composer Installer Essentials		
Description			
<p>It's very hard to tweak mod_rewrite rules if the .htaccess file is not under control of the user. It's a little bit harder to update the file to a new version, but now it's impossible to provide a custom .htaccess with a default deployment without any workarounds.</p> <p>Also to tweak the .htaccess rules we should stop rewriting if URLs for /apple-touch-icon-*.png are requested, since this will clutter the log and should be treated like the favicon.ico file.</p>

I have to edit the .htaccess file to make Flow work on my shared host. So, I second the motion of not keeping .htaccess itself in version control. Maybe have a `_htaccess` and copy it in place if there's no .htaccess there.

I have to add the following line to .htaccess to give flow the right php settings:

```
SetEnv PHPRC /home/[username]/.php/php.ini
```

#2 - 2013-05-21 12:05 - Robert Lemke

- Category set to Package
- Status changed from New to Needs Feedback
- Target version set to 2.0

Can you provide a patch and push it to Gerrit? Otherwise we need to postpone it to 2.0.1

#3 - 2013-08-14 15:35 - Karsten Dambekalns

- Target version changed from 2.0 to 2.0.1
