<b>Updated:</b>	2013-05-15	<b>Due date:</b>	
<b>Subject:</b>	Perfection the Party and Account Management Module		
<b>Description</b>			
<h3>Perfection the Party and Account Management Module</h3>			
<ul style="list-style-type: none"><li>- Target Audience: <b>users</b> who are competent to administrate an installation's users and accounts data</li><li>- Responsible: Rens Admiraal</li><li>- Implemented by: Sebastiaan van Parijs, Adrian Föder</li><li>- Amount: not estimatable, <b>not paid, done on voluntary basis</b></li><li>- Version: <b>not planned yet</b></li><li>- Planned Implementation continuous work</li></ul>			
<b>Motivation</b>			
As soon as a project introduces a user base, including accounts (which is intrinsically the case on Neos projects due to the Administrator/Editor roles), the need for versatile management possibilities is raised.			
<b>Goal</b>			
Administrators should be able to use the GUI for everything the data base provides, in a company-kind manner, that is, for example, resetting a user's or bulk-resetting a group of user's password with an auto-generated one; providing a way to set and assign roles to users; and, not at least, provide a way to add GUI implementations for concrete implementation classes (not every Account has a TYPO3.Party assigned, and not every AbstractParty has a SinglePerson).			
<b>Deliverables</b>			
<ul style="list-style-type: none"><li>- MUST have a way to assign roles to users</li><li>- MUST reflect the fact that the Core only prescribes Account and AbstractParty, implementors should be able to set GUI implementations of their own Party and Person implementations</li><li>- SHOULD have a way to set an auto-generated password to the account</li><li>- SHOULD provide the possibility to bulk-reset user passwords</li></ul>			
<b>Subtasks:</b>			
Feature # 48167: Command line account and role browsing			<b>Accepted</b>
