

TYPO3.Flow - Feature # 47948

Status:	Closed	Priority:	Should have
Author:	Alex no-lastname-given	Category:	Resource
Created:	2013-05-05	Assigned To:	
Updated:	2013-05-21	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	support for resource references		
Description			
<p>It is not always suitable to download and import external resources, which are for example accessible over http: Large video collections are normally located on different servers. Another example is the reference of research publications which are already accessible over an persistent uri.</p> <p>"It is important to completely ignore the fact that resources are stored as files somewhere in TYPO3 Flow's directory structure – you should only deal with resource objects."</p> <p>Following this note of the documentation, i would suggest, to completely ignore the fact where resources are stored (including remote files).</p>

Alex, thanks for the suggestion. This will be, in one or the other way, part of a major rework of the Resource Management in Flow 2.1. I'll keep it in mind!
