

## Core - Bug # 48181

<b>Status:</b>	Closed	<b>Priority:</b>	Should have		
<b>Author:</b>	Ralle Büchnitz	<b>Category:</b>	Content Rendering		
<b>Created:</b>	2013-05-14	<b>Assigned To:</b>			
<b>Updated:</b>	2013-09-25	<b>Due date:</b>			
<b>TYPO3 Version:</b>	6.0				
<b>PHP Version:</b>	5.3				
<b>Complexity:</b>					
<b>Is Regression:</b>	No				
<b>Sprint Focus:</b>					
<b>Subject:</b>	Opening an image wit text element fails after update to 6.0.x				
<b>Description</b>					
I get the follwoing error:					
Core: Exception handler (WEB): Uncaught TYPO3 Exception: #1320575630: Folder windows-7/ does not exist.   TYPO3\CMS\Core\Resource\Exception\FolderDoesNotExistException thrown in file /html/typo3/typo3_src-6.0.5/typo3/sysext/core/Classes/Resource/ResourceStorage.php in line 1638. Requested URL: <a href="http://www.qitec.de/typo3/alt_doc.php?returnUrl=mod.php%3F%26M%3Dweb_list%26id%3D4&amp;#38;edit[tt_content][13]=edit">http://www.qitec.de/typo3/alt_doc.php?returnUrl=mod.php%3F%26M%3Dweb_list%26id%3D4&amp;#38;edit[tt_content][13]=edit</a>					
The image is still there and displayed in Frontend even after cache was cleared. I also stepped through all update-steps in install tool.					
Maybe this should only be a warning and the content element should still open with a 'missing image' hint or something like that.

### History

#### #1 - 2013-05-15 06:06 - Georg Ringer

looks like #46785 can you test the patch and report feedback in gerrit or here?

#### #2 - 2013-05-15 09:11 - Ralle Büchnitz

1. this is a folder exception
2. the web path for the image works and the image is still present ([http://www.domain.de/fileadmin/\\_migrated/pics/win7\\_ultimate.jpg](http://www.domain.de/fileadmin/_migrated/pics/win7_ultimate.jpg))
3. the only path that contains the string "windows 7/" comes from the destination link (<http://www.domain.de/windows-7/>)

I think the path resolution to the picture uses for some false reason the url path to the site in the Backend. Maybe the abs\_ref-prefix was mixed up during 6.0 update!?

PICTURE :: DOMAIN/fileadmin/\_migrated/pics/win7\_ultimate.jpg

LINKS TO :: DOMAIN/windows-7/

#### #3 - 2013-05-15 10:09 - Alexander Opitz

This isn't #46785 as it is sitting somewhere else.

From which version did you upgrade?

#### #4 - 2013-05-15 10:09 - Alexander Opitz

- Status changed from New to Needs Feedback

#### #5 - 2013-05-15 10:21 - Ralle Büchnitz

Prior version was 4.7.9

#### #6 - 2013-06-05 12:32 - David Voigt

After updating TYPO3 from a 4.x version (sorry, I don't remember the exact version) to 6.0 I'm getting this error:

Oops, an error occurred!

Folder typo3/# does not exist.

More information regarding this error might be available online.

The log is a little more specific:

Core: Exception handler (WEB): Uncaught TYPO3 Exception: #1320575630: Folder typo3/# does not exist. |

TYPO3\CMS\Core\Resource\Exception\FolderDoesNotExistException thrown in file

/html/typo3\_src-6.0.6/typo3/sysext/core/Classes/Resource/ResourceStorage.php in line 1644. Requested URL:

http://www.my-domain.de/typo3/alt\_doc.php?returnUrl=%2Ftypo3conf%2Fext%2Ftemplavoila%2Fmod1%2Findex.php%3Fid%3D138%23c1fdb4d575b55497f755497f7a771d49826b7fad&edit[tt\_content][172]=edit

What I did:

- Update to 6.0.6
- Create new page template with Templavoila
- Create new page
- Assign newly created template to page
- Create a standard text element
- Edit the text element
- Make a copy of the text element

Everything works as expected until now, but then:

- Edit the copied element - crash
- Edit the original element - crash

What I've tried so far, unsuccessfully:

- Deleted the copy, but still can't edit the original text element. Editting works fine on all elements on all other pages.
- Switched the page template back to what it was
- Logged out and back in, cleared cache

What works:

- deactivate RTE
- remove faulty link from text (it was copied from a source where it says <a href="#">
- reactivate RTE, all is fine

Does this belong here, too? It says "Core:" and it has the exact same exception number.

**#7 - 2013-06-08 15:43 - Philipp Gampe**

Can you test whether the patch for #47222 fixes the issue?

**#8 - 2013-09-24 09:43 - Alexander Opitz**

- *Is Regression set to No*

Hi,

please can you test latest versions of TYPO3 CMS 6.0 or 6.1 and tell us if your problem was fixed or not.

**#9 - 2013-09-24 09:53 - Ralle Büchnitz**

Typo3 is version 6.1.5 now and everything works fine now.

THX

**#10 - 2013-09-25 10:02 - Alexander Opitz**

- *Status changed from Needs Feedback to Closed*

Thanks for testing and reporting.
