[BUGFIX] inline editables should preserve their content after applying changes in the inspector

Before this change, the following bug appeared:

- you modified e.g. the text of the "Text" content element
- then, for the same content element, you directly changed a property in the inspector (f.e. toggling "hidden")
- then, press apply.
- This has reset the contents of the "Text" content element back to the initial value; losing all content changes.

The bug was that the inspector stored **all** properties of the node, and on apply, restored all of them. The bugfix is that the inspector only updates properties that were changed and not all of them on apply.
