Subject:	Textbook: Responsive web		

Description

Headline and copytext

Headline: Responsive web

Copy: When you create responsive websites, your CMS should naturally aid you by being responsive as well. But TYPO3 Neos goes further than that - it will automatically adjust your images for your audiences using progressive enhancement. Your websites will load faster, feel more fluid and generate a better user experience than websites built with any other CMS on the market.
Since the advanced content editing mechanisms in TYPO3 Neos work together with your website you can change your contents directly within a responsive viewport - getting immediate results and reducing the time of testing your contents on different devices.

Idea and Reasoning

Since responsive is the new "accessible" and thus the new hot thing on the web, we should make this section a priority.
Focus should be ease of use, reduced testing times etc.

Icon and image style

- Some handheld device
- Animated GIF or HTML5 video showing a finger over some mobile device

Suggest cutting it down a bit:

When you create responsive websites, your CMS should naturally aid you by being responsive as well. But TYPO3 Neos goes further than that - it will automatically adjust your images for your audiences using progressive enhancement. Your websites will load faster, feel more fluid and generate a better user experience than websites built with any other CMS on the market.
Since the advanced content editing mechanisms in TYPO3 Neos work together with your website you can change your contents directly within a responsive viewport - getting immediate results and reducing the time of testing your contents on different devices.

#5 - 2013-05-17 11:34 - Mathias Schreiber

Agreed.

By that time I didn't have the "scrolling page" concept in mind.

We could always add a dedicated page for responsive whenever we see fit.

I really like the scrolling idea since it makes it easy to deliver different amounts of content.
