Subject:	Rename Styling to new structure		
Description	<p>In order to have a good structure of our styling we need to reorganize it</p> <ul style="list-style-type: none">- move every scss source file to a Styles-folder inside Resources/Private- keep bootstrap as solid base for responsive features and a big set of components- use it as our own base and also adjust the original files for our needs- use the bootstrap variables.scss as constant definition file- have an own mixin file- have a foundation folder inside Resources/Private/Styles- use an own includes.scss where also the bootstrap files are included- create files for the modules for specific styles- create files for the components (i.e. inspector..)- every class has to be prefixed with neos-- keep lowercase-dashed file names which are as short as possible and use cascading instead of long-named classes
