Subject:	Extbase: Backport lazy dependency injection		
Description			
In TYPO3 flow 2.0 we have now lazy dependency injection. This feature is really awesome and it will be cool if we have this also in extbase. In TYPO3 flow this feature speed up flow because the the injected classes will only loaded if you need them.			
The related flow ticket is http://forge.typo3.org/issues/43819

The backport from the feature is not as easy as i expected, because the implementation of DI is completely different in TYPO3 flow. So if we want to have this the migration will be a little bit complex.

Do you have some numbers on this? I don't think, that a real performance boost might apply to our situation as it does to Flow.

The patch pushed to gerrit was abandoned since it was stalled for a long time. This needs a fresh approach :)
