# TYPO3.Flow - Bug # 49189

Status:	Resolved	Priority:	Must have	
Author:	Robert Lemke	Category:	Session	
Created:	2013-06-17	Assigned To:	Robert Lem	<e< th=""></e<>
Updated:	2013-06-20	Due date:		
PHP Version:	5.4			
Has patch:	No			
Complexity:	medium			
Affected Flow ver	sion: Git master			
Subject:	Session storage has poor p	erformance for hundreds of session	ns	
Description				
If an application co	ntains hundreds of simultaneous s	sessions, the garbage collection me	echanism perform	s poorly which can eventual
result in an unresp	onsive application.			
The root cause for	this is the way session entries are	e retrieved from the cache (in order	to check if they no	eed to be removed): in its
	-	n and those acting as storage entrie	-	
•		ds to fetch cache entries by tag. Mc		
	-	the complexity for this operation is		
,	<b>o</b> 1 <i>i</i>	1 7 1	1 5	
The solution would	be to split up caches into a meta	cache and a storage cache. Given	this, the session of	garbage collector would be
		cache and a storage cache. Given out having to use the find-by-tag m		garbage collector would be
		Ŭ		garbage collector would be

The option name for setting the garbage collection probability has changed: the settings now come with a dedicated section for garbage collection which contains the probability and, added by this patch, the maximum number of old sessions which may be removed by the garbage collector during one invocation.

You need to flush caches with --force after applying this change set.

Fixes: #49189 Resolves: #49190 Releases: master, 2.0

### Revision 54d08ed5 - 2013-06-19 16:06 - Robert Lemke

[BUGFIX] Session storage has poor performance for hundreds of sessions

Fixes an issue with the storage backend for sessions which resulted in a bad overall performance when hundreds of sessions were active simultaneously. The improved implementation is now based on two separate cache storages and a new garbage collector which allows for more fine grained tuning.

If you previously used a different than the default cache backend for sessions, you will need to adjust your configuration because this implementation is based on two distinct cache backend configurations (see updated Caches.yaml).

The option name for setting the garbage collection probability has changed: the settings now come with a dedicated section for garbage collection which contains the probability and, added by this patch, the maximum number of old sessions which may be removed by the garbage collector during one invocation.

You need to flush caches with --force after applying this change set.
