[FEATURE] Install tool: Remove obsolete keys from LocalConfiguration

Some configuration settings are obsolete, but they have never been
actively removed from LocalConfiguration. The patch introduces a
list of obsolete configuration options (like SYS/extCache) to the
install tool step controller and silently removes those settings
from LocalConfiguration to keep it clean. This also obsoletes
some deprecation code within core bootstrap.

Revision 003ff66c - 2013-06-21 23:13 - Christian Kuhn

[TASK] Remove last bit of multiplyDBfieldSize handling

multiplyDBfieldSize was used in the past to extend the size of
database fields to cope with UTF8 content if the database did
not support it. The setting was deprecated for a long time already
and removed from DefaultConfiguration with version 6.0.
The patch removes still existing handler code from ext:install.
The setting is also removed from LocalConfiguration if found.

Revision 7e04899e - 2013-06-21 23:16 - Christian Kuhn

[TASK] Remove last bits of gdlib_2 setting

Support for gdlib version 1 was removed with core version 4.4.
The patch removes the last code fragments where the old GFX/gdlib_2
setting was used and activates a key in ext:install to remove
the setting from LocalConfiguration.

Revision 2332335a - 2013-06-23 11:42 - Christian Kuhn

[TASK] Remove last bits of forceCharset handling

Core version 4.5 introduced UTF8 only for charset conversion, and
accepted a fallback under special circumstances. The fallback was
removed with 4.7.
This setting is now finally fully removed from the configuration
and not taken into account anymore.

[BUGFIX] LocalConfiguration cleanup breaks install process

The method to kick out obsolete settings from LocalConfiguration
in the install tool step installer is called too early and the file
may not exist already. Move the method call below step one of the
installation process that creates the file.
