Subject:	Error finding folder for rte links preparing		
Description	<p>I generated many tt_content objects with an script to migrate an old "Contentido"-CMS Page to TYPO3 6.1.</p> <p>During editing the content to make it clear I noticed many errors while TYPO3 CMS tried to get images, and links passing to the <link >-Tag.</p> <p>If the Object not found in the given Location it throws an uncaught Exception:</p> <p>Folder cms/upload/file.ext does not exist.</p> <p>or</p> <p>Folder cms/front_content.php?id=123 does not exist.</p> <p>of Course it doesn't... I created the Folder an uploaded any of the files from the old page. It worked for any image. But now, at saving the RTE Data it makes any Link from <a href="cms/frontend_content.php... to <link cms/frontend_content.php... > and then it throws the Exception described above at reopening the Content Element.</p> <p>In the ResourceFactory I added an try and catch operation to prevent this error.</p> <p>Because I think this could also happened when sers entered an wrong link I would post my Patch for all here.</p> <p><small>sorry for my bad english ;)</small></p>

I think this one can be closed,

a, Stan cant reproduce

b, if the author is linking to files the migration is wrong should have bin file:0:/cms/ ...
