

TYPO3.Flow - Bug # 49545

Status:	Closed	Priority:	Should have
Author:	Adrian Föder	Category:	l18n
Created:	2013-07-01	Assigned To:	
Updated:	2013-07-15	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: Git master			
Subject:	Non-plural translations are not found if arguments are used		
Description			
A simple translation which is not meant for handling plurals is not correctly resolved when used with arguments, for example, <code><f:translate id="someId" arguments="{0: 2500}" /></code> does not resolve correctly. The error appears in \TYPO3\Flow\l18n\Translator::translateById where the \$pluralForm equals to 'other' as soon as arguments are set (that's the distant observation so far, have to dig deeper).

History

#1 - 2013-07-01 16:19 - Adrian Föder

the actual reason is, that \TYPO3\Flow\l18n\Translator::getPluralForm per convention takes arguments' first item, if it's the only one and numeric, as quantity. So the above mentioned example is such a case where this problem occurs.

What could we do here?

#2 - 2013-07-01 16:19 - Adrian Föder

- Status changed from Accepted to Needs Feedback
- Assigned To deleted (Adrian Föder)

#3 - 2013-07-03 23:20 - Alexander Berl

See duplicated bug #45062, the fix is already accepted and only needs to get merged.

#4 - 2013-07-04 09:21 - Adrian Föder

- Status changed from Needs Feedback to Closed

closed as being duplicate of #49545

Thanks Alex for the notice!
