| Subject: | Error after adjusting Name (URL) in the Backend | | |
| Description | | | |
| <p>If you change the Name (Url) field for a page node you will have a menu link to the backend in the frontend and not to the frontend.</p> <p>Steps to reproduce:</p> <ul style="list-style-type: none">- create a new page node- publish it and everything is ok actually. You will have a link like http://master.neos/node51d6d8ed13acd- if you now change the name (url) field to e.g. test- save and publish it- go to the frontend and you will now have a link like http://master.neos/test@user-admin.html in the frontend instead of http://master.neos/test <p>That behavior will only happen with the last modified node. So if you create a new node, everything is ok.</p> <p>I actually use the dev-master.</p> | | | |
