[FEATURE] Add TypoScript condition for ApplicationContext

The following condition is available in TypoScript and TSconfig
for testing the ApplicationContext:

[applicationContext = value1, value2, ...]

One of the given values matching the applicationContext.
Wildcards + and * are allowed, as well as regular expressions
delimited with /PREG_PATTERN/

Examples:

[applicationContext = Development/Debugging, Development/Profiling] # matching exactly "Development/Debugging" or "Development/Profiling"
[global]

[applicationContext = Production*] # matching any applicationContext with a rootContext of "Production", # for example "Production/Live" or
"Production/Staging"
[global]

[applicationContext = /^Production\/Staging\/Server\d+$/] # matching "Production/Staging/Server1", "Production/Staging/Server2" # and so on
[global]
