

TYPO3 Flow Base Distribution - Bug # 50255

Status:	New	Priority:	Should have
Author:	Carsten Bleicker	Category:	
Created:	2013-07-21	Assigned To:	
Updated:	2013-11-16	Due date:	
Affected Flow version: Flow 2.0.0 beta 2			
Subject:	Different collations runnig migrate/update		
Description			
<p>Hi,</p> <p>i am runnig flow doctrine:migrate and this results in a collation on the abstractparty f.e. with utf8_general_ci. this was confusing me because my mysql settings has default utf8_unicode_ci. i deleted the whole db and runnig flow doctrine:update. now the collation of any field is utf8_unicode_ci. deleting it again, runnig migrate ... results in utf8_general_ci. i have no idea where these different collations comes from, any idea?</p> <p>what helps is setting some settins in mysql config "my.cnf":</p> <pre>init-connect = 'SET NAMES utf8' init-connect = 'SET collation_connection = utf8_unicode_ci'</pre> <p>after this change migrate and update results in utf8_unicode_ci.</p> <p>kind regards carsten bleicker</p>
