Subject:	refactor DeploymentService > DeploymentRepository		

Description

To support other configuration formats, the DeploymentService should be refactored.

Other formats (instead of the default 'PHP') might be JSON, XML or a implementation fetching the informations from a database or custom webservice.

Instead of the current DeploymentService implementation we need a "DeploymentRepositoryInterface", which can be implemented by a custom DeploymentRepository. Surf should provide then a repository implementation for the current php-file-based configurations.
