

TYPO3.Flow - Bug # 51082

Status:	Resolved	Priority:	Should have
Author:	Christian Müller	Category:	MVC - Routing
Created:	2013-08-15	Assigned To:	Bastian Waidelich
Updated:	2014-02-21	Due date:	
PHP Version:			
Has patch:	No		
Complexity:	easy		
Affected Flow version:	(any)		
Subject:	Object Route Parts should take persistence_object_identifier into account		
Description			
If no uriPattern is set for a Object Route Part it defaults to the identity properties of the entity. It should also work to fallback to the persistence_object_identifier instead which doesn't happen atm but results in an exception.

[BUGFIX] Object Route Parts fall back to technical identifier

As described in the routing section of the documentation, the `Object Route Parts` should use the technical identifier to represent an object if no uriPattern is specified and the specified object does not contain any identity properties.

Instead an exception was thrown if no uriPattern could be determined because ``ClassSchema::getIdentityProperties()`` doesn't return the property name of the technical identifier.

This change fixes this by falling back by skipping the ObjectPathMapping if no uriPattern is defined.

FYI: This is how it used to be. The IdentityRoutePart uses **ClassSchema::getIdentityProperties()** to retrieve the properties that identify an entity. Apparently this does not work any longer if an object only uses the automagical persistence_object_identifier..
