| <b>Description</b>   |   |                     |                    |
| A lot of the unit tests contain the TYPO3 4.x license boilerplate and claim to use GPL v2. There are some extra docblocks scattered around and some tests use checks for class_exists() around require_once(). |   |                     |                    |
