[TASK] Install tool configuration system

The patch implements a "configuration system" to the install tool that bundles several settings to enable them on click depending on system capabilities.

A "feature" is represented by a set of configuration options that are filled by different presets. Presets have a priority, the best preset is the first one. Presets can be available or not available and active or not. For example the "image handling" feature has the presets "GraphicsMagick" and "ImageMagick 6" and a "Custom" preset if the others do not fit.

This first patch implements "Charset conversion", "Image handling", "Development / Production" and "Extbase object cache" settings.

During installation the available preset with highest priority are configured.
