

TYPO3.Flow - Feature # 51459

Status:	New	Priority:	Should have
Author:	Adrian Föder	Category:	MVC
Created:	2013-08-28	Assigned To:	
Updated:	2013-10-22	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Allow catching of particular exceptions on property mapping		
Description			
<p>I stumbled upon this requirement since I got a TYPO3\Flow\Property\Exception\TargetNotFoundException in the \TYPO3\Flow\Property\TypeConverter\PersistentObjectConverter::fetchObjectFromPersistence method: this one leads to an TYPO3\Flow\Property\Exception exception, hence the custom error view handling is not able to catch the actual exception and result into a 404, for example.</p> <p>My idea would be to allow one to catch particular property mapping exceptions and call user defined code, this could look, for example, like</p> <pre>1 public function initializeShowAction() { 2 \$productPropertyMappingConfiguration = \$this->arguments->getArgument('product')->get.....; 3 \$productPropertyMappingConfiguration 4 // ->forProperty('datasheetResource') 5 ->catchTypeConverterException(6 'TYPO3\Flow\Property\Exception\TargetNotFoundException', 7 1297933823, 8 function(\Exception \$exception) use (\$controller) { 9 \$controller->getResponse->setHeader(404); 10 // ok this is becoming pseudo code now ;) 11 }) 12}</pre>
