TYPO3.Fluid - Bug # 5150

• ···	Resolved	Priority:	Should have
Author:	Bastian Waidelich	Category:	Core
Created:	2009-10-27	Assigned To:	Bastian Waidelich
Updated:	2010-10-20	Due date:	
Has patch:			
Affected Flow vers	ion:		
Subject:	Rewrite ViewHelpers to supp	ort new inline notation	
Description			
14 <i>2</i> 11	с. н. с изна и и си си и		
	for the Fluid Inline notation (aka	snorthand syntax") implemented w	vith r3333 we introduced a breaking change:
While			
(f:format.oron/!(h	log.title}' maxChars=30)}		
{i.iomat.crop({b	iog.title} maxchars=50)}		
can be transformed	to the new syntax like:		
{blog.title -> f:for	mat.crop(maxChars: 30)}		
there currently is	no equivalent for:		
{f:format.crop('st	atic string' maxChars=30)}		
1			
	allow the syntax to be applied to s		
		tatic strings. I old tag syntax, but IMO we should	d just allow:
Obviously you can w	vork around this by using the good		d just allow:
Obviously you can w			d just allow:
Obviously you can w	vork around this by using the good		d just allow:
Obviously you can w {'static string' -> t	vork around this by using the good f:format.crop(maxChars: 30)}	l old tag syntax, but IMO we should	
Obviously you can w {'static string' -> t	vork around this by using the good f:format.crop(maxChars: 30)}	l old tag syntax, but IMO we should	d just allow: so that you could specify the value like this:
Obviously you can w {'static string' -> t The alternative (as c	vork around this by using the good f:format.crop(maxChars: 30)} discussed with Karsten) would be t	l old tag syntax, but IMO we should

- format.number - format.currency - format.crop - format.date - format.nl2br - format.printf - cObject (v4 only) - translate (v4 only) - html (v4 only) Affected view helpers that IMO don't need support for inline notation: - alias - for / groupedFor - cycle - if / then / else security.ifGrantedAuthority / security.ifAccess (v5 only) - be.container (v4 only) - debug (v4 only) - errors - section - form - link.* **Related issues:** related to TYPO3.Fluid - Feature # 5033: Improve Shorthand Syntax of ViewHelpers 2009-10-19 Resolved

Associated revisions

Revision beaa1450 - 2009-10-28 16:16 - Bastian Waidelich

[+FEATURE] Fluid (ViewHelpers): extended format.date viewhelper by an additional "date" argument. Now you can write {f:format.date(date:

'yesterday')} in your templates. This change is backwards compatible! Relates to #5150

[+FEATURE] Fluid (ViewHelpers): extended if viewhelper by arguments "then" and "else". Now you can write {f:if(condition: 1, then: 'yes', else: 'no'} in your templates. This change is backwards compatible! Relates to #5150

[~TASK] Fluid (Core): added check for reserved keywords to TemplateVariableContainer. This relates to #5158

[~TASK] Fluid (Tests): moved and renamed VariableContainerTest

History

Hey :-)

With the f:format.crop example, I don't really see why this should be needed :-) You can just crop it manually in that case ;)

I'd be curious what example really make sense in this context.

Greets and all the best, Sebastian

#2 - 2009-10-28 12:03 - Bastian Waidelich

- Subject changed from Support static strings in inline notation to Rewrite ViewHelpers to support new inline notation

- Assigned To set to Bastian Waidelich

UPDATE:

We've decided to rewrite the affected view helpers instead.

That is:

uri.resource:

from {foo -> f:uri.resource()} to {f:uri.resource(path: foo)} (already done in r3354)

cObject (v4 only):

from {foo -> f:cObject(typoscriptObjectPath: 'lib.myCustomCObject')} to {f:cObject(data: foo, typoscriptObjectPath: 'lib.myCustomCObject')}

format.date:

from {foo -> f:format.date(format: 'Y')} to {f:format.date(date: foo, format: 'Y')}

translate:

from {foo -> f:translate(key: 'bar')} // here, {foo} would be the fallback - not very intuitive to {f:translate(default: foo, key: 'bar')}

#3 - 2009-10-29 12:31 - Bastian Waidelich

- Status changed from New to Resolved

Resolved in r3365
