Found out how to reproduce the problem:

- Add a MySQL User with no username and no password.
- This will lead to a successfull DB-Connection during DatabaseConnect Step.
- The step will be skiped and this leads to a infinite redirection loop.

It's possible to fix this by checking username in

TYPO3\CMS\Install\Controller\Action\Step\DatabaseConnect->isConnectSuccessful

don't know if this is the right solution, database connections without a username will be not possible after this kind of fix..
