Affected Flow version:			
Subject:	Property Mapper: different action required when identity query returned more than 1 object		
Description			
<p>Currently, when <code>\F3\FLOW3\Property\Mapper::findObjectByIdentityProperties</code> finds more than 1 object, it returns FALSE, which is the same as if 0 objects were found. There is an error message added to the mapping results, but this doesn't appear anywhere since an exception is thrown first.</p> <p>The <code>transformToObject</code> method then throws an exception that is worded like this: "Querying the repository for the specified object was not successful."</p> <p>There should be either a more verbose exception message stating that there was an integrity violation problem detected while querying, or a message added to the system logger to at least give a hint towards the real problem.</p> <p>Alternatively, only the first found object could be returned and just a warning added to the log.</p> <p>Even if it should not be possible for more than 1 object with the same identity to exist in the persistence backend, we should still take this case into consideration.</p>

Revision 87f4abaa - 2009-11-30 21:46 - Karsten Dambekalns

[~TASK] FLOW3 (Property): The Mapper now throws different exceptions if no ore more than one object were found for given identity properties. Fixes #5171.
