Subject:	Exception instead of nice warning when opening filelist as restricted be-user after updating 6.1.3 -> 6.1.4		
Description	<p>After updating from 6.1.3 to 6.1.4, I get an exception like in the attached screenshot, when opening the filelist as restricted backend-user.</p> <p>Before, I just got a nice, blue, warning - see attached screenshot.</p>

Revision 6fe13fdb - 2014-01-31 14:57 - Ingo Schmitt

[BUGFIX] Do not show exception when folder is not accessible

When a storage folder is not accessible for the user an exception is displayed. Same if the folder is missing.

This patch changes the exception to
\\TYPO3\CMS\Core\Resource\Exception.

The user will get a flash message and FAL tries to display the parent folder of the restricted folder. If the folder is missing the parent folder is displayed.

Resolves: #51762, #51319

Releases: 6.2

I'm experiencing the same problem right now in 6.2.0beta4. The restricted be-user wants to access the file mount (which is fileadmin/user_upload). When the user loads the file list module the above mentioned exception is displayed. I've also inserted the UserTS proposed here: <http://typo3.org/teams/security/security-bulletins/typo3-core/typo3-core-sa-2013-003/>. An admin user does not get the exception. The file mount is browseable.

Edit: For testing I've created a subfolder in fileadmin/user_upload/ and set this as root for the file mount. But it does not solve the problem. The exception is still thrown.

- *Status changed from Accepted to Needs Feedback*

please check if that still is happening in the current master as of today;

sadly that won't be backported as it introduced a new class.

Error display is now as attached screenshot. Only happens when the filesystems rights are changed when the user is browsing the folder in the list or the user modifies the GET parameter for the path.

If the folder is not accessible the link to the detailed view is not existing.

So, the new screen is fine for me, since a "normal" user won't see it.

#14 - 2014-02-03 10:25 - Bjoern Jacob

I've checked out the current master as of today. With this version I don't get any exception. The behavior is as expected, i.e. the user can show the "root" of the file mount.
