Subject:	Deleting Home page leaves backend inaccessible		
Description	<p>I have noticed a bug/problem when "home" page is deleted.</p> <p>I had a simple Node/Page set up like this</p> <ul style="list-style-type: none">Home<ul style="list-style-type: none">Who We AreAppointmentsUseful Stuff <p>I then created a couple of pages under Home and ended up with the following:</p> <ul style="list-style-type: none">Home<ul style="list-style-type: none">New Page<ul style="list-style-type: none">New PageWho We AreAppointmentsUseful Stuff <p>I hadn't meant to create the two New Pages under each other as I was after this:</p> <ul style="list-style-type: none">Home<ul style="list-style-type: none">Some New PageAnother New PageWho We AreAppointmentsUseful Stuff <p>So I deleted the New Page. Got the dialogue to check that I wanted to delete and went ahead. Nothing seemed to happen (still in page tree) so tried again. Again nothing. (Apparently I was to quick hitting the deletes)</p> <p>I then tried to go to workspaces but got this error:</p> <p>"Page Not Found Sorry, the page you requested was not found"</p> <p>Then tried to log in again to back end and also after I shut down everything restarted cache and tried to log in to back end but got this:</p> <p>"An error occurred while trying to call TYPO3\Neos\Controller\Frontend\NodeController->showAction(). Error for node: Could not convert array to Node object because the node "/sites/myDemoSite/Home" does not exist.</p> <p>However when I just connected to front end site seemed OK.</p> <p>I had a look in the database (nodedata) and found that in fact there were 2 "Home" nodes of type Typo3.Neos:Pages One marked as removed in what must have been a draft non published workspace. Once I deleted this everything worked again but back to my original flat layout.</p>		

So then I tried the following with all but one page Published.

Home

 Some New Page

 New Page (not published)

Who We Are

Appointments

Useful Stuff

I then purposefully deleted the Home Node/Page. Got the same behaviour as above. but when I looked in the database it looked as if

"Home" was duplicated and marked as deleted. "New Page" was marked as deleted but "Some New Page" did not exist.

Anyway it seemsto be a problem when you delete the sites homepage on purpose or not

I hope my explanation isn't too long winded!

Kind regards

Nick
