TYPO3.Fluid - Bug # 52182

Status:	Rejected	**Priority:**	Should have
Author:	mario chiari	**Category:**	ViewHelpers
Created:	2013-09-23	**Assigned To:**	Bastian Waidelich
Updated:	2013-09-24	**Due date:**	

Has patch:	No
Affected Flow version:	Flow 2.0.0
Subject:	& vs. &

Description

see http://www.htmlhelp.com/tools/validator/problems.html#amp
It seems that Fluid renders

    <f:uri.action ... arguments="{obj1:value1, obj2:value2}"></f:uri.action>

as

    obj1=value1&obj2=value2

instead of

    obj1=value1&obj2=value2

Hi Mario,

thanks for the report.
After thinking about this again I don't think this is a bug in fact:

    1<f:link.action ../>

already correctly encodes the **href** attribute converting **&** to **&amp** and such.
That

    1{f:uri.action(..)}

returns the unmodified URI is actually intended as it only needs to be encoded for (X)HTML output.

If you need the encoded URI you should use the **format.urlencode** ViewHelper like:

    1{f:uri.action(..) -> f:format.urlencode()}
